The Future Soundscape: How Pierre Schaeffer's Radical Ideas Still Need to Shape Music

Pedro Pestana

We are entering the 30th anniversary of Pierre Schaeffer's death, which coincidentally roughly overlaps with the dominance of digital over analogue media, yet conceptually the work done in the Musique Concrete era remains as relevant today as it was during Schaeffer's time some 70 years ago. Particularly relevant, and the focus of this text, are his writings on a new approach to musical composition, which are unusually renaissance-like in their scope while maintaining a futuristic stance that is still years in the making.

His Treatise on Musical Objects [Schaeffer, 2017], which only saw the light of day in the English language in 2017, is a monumental revision of what musical composition could and should be. Schaeffer argues that the principles of musical organisation are guided by both tradition and technology and stem from the properties of the human voice, later expanded by the catalogue of musical instruments that were, at their time, disruptive technological evolutions. This results in an organisation based on the concept of musical notes: notes along time – melody – and notes superimposed in time – harmony. The dimension of timbre is mostly a fatal reflection of the available technologies. The composer has minimal control over it, and timbre is largely under-specified before audio recordings make it possible.

In Schaeffer's time, music no longer needed to be shackled by the limitations of musical instruments, and the key principle of his

compositional work may very well be based on the way recording influences the process of sound organisation, particularly in the sense that timbre could then be: 1) allowed to be fixed in time by the recording, 2) infinitely varied, drawing from any imaginable sound source, not just performable instruments. With this in mind, the Treatise diligently questions what novel strategies for sound organisation there are, in keeping with the limitation that music is "sound in time" - there is thus a need to rethink the sequencing of sounds (melody, if one focuses on notes) and the layering of sounds (harmony). Schaeffer does this by proposing a host of concepts that were revolutionary for the time, maybe even for our time, most notably the idea of reduced listening (excluding semantics and causality from sounds, listening purely as a sensory phenomenon [Chion, 2012]) and the concept of musical object (sound as an independent entity, not bound by traditional notions of notes, but as a distinct sonic event that can be analysed and manipulated).

With this theoretical underpinning, Schaeffer developed a body of work that is equally revolutionary and radical, and has influenced many posterior artistic movements, even outside the rigid bounds of "art music". One can easily say that turntablism, sampling, hip-hop and EDM have a great debt of gratitude to the electroacoustic pioneer.

Why is it then that a look at the musical landscape of the 21st century shows a majority of music bound by tradition and note, possibly more rigidly set on schemas (common meter, cliche harmonic progressions, 4-bar loops, harmonic simplicity and repetitiveness, repeated melodic motifs, minimal form variation, formulaic structures) than ever before?

The answer is surely riddled with complexity and deeply ingrained in cultural indeterminacies, but two tentative suggestions leave space for reflection and can help propel Schaeffer's work forward.

On the one hand, there is an interesting quote in the opening

of the Treatise “Work at your instrument”. It is relevant because subsequently “instrument” becomes diffuse, transformed into a never-ending array of techniques and possibilities. The language of tradition possibly came about through a loop between the technological advances in instruments, and the playing virtuosity they enabled. It is virtuosity that drives the language of music forward. One needs to redefine the concept of virtuosity and physicality on a laptop or on manipulating a recording so as to consolidate a way of moving forward other than simply through blind experimentation and chance.

On the other hand, the sheer openness of the musical material that Schaeffer advocated may paradoxically limit creative productivity rather than actually inspiring it. This ties in with modern notions such as the paradox of choice (more options leave one less satisfied [Schwartz, 2015]) or decision fatigue (in a creative context, too much time is spent browsing options [Peuquet, 2018]). Artists will often limit their materials so as to not feel overwhelmed, something that will frequently lead to much more creative outputs. There is a sense of irony in that it may come full circle to the idea that the tropes of musical tradition are actually inevitable responses to the paradox of choice, and Schaeffer’s proposals were too big of a leap forward to be synthesised in such a short amount of time. While the technology has perfectly adapted, the slow mechanism of brain evolution needs some more generations to come before a true shift in sound organisation takes root.
